

**Definition of Limit** [c, L are real numbers]: as x approaches c, the limit of f(x) equals L  $\lim_{x \rightarrow c} f(x) = L$

Method 1: Graphing	Examples
<p>Approaching from BOTH the left and right side of <math>x = c</math>, follow the graph of the function towards the value of <math>c</math>.</p> <p>What does the y-value "approach" as the function approaches the given x-value?</p> <p>Any value of the function at <math>x = c</math> does not affect whether there is a limit.</p>	
Method 2: Table of Values	Examples
<p>What does the y-value "approach" as the function approaches the given x-value?</p> <p>Any value of the function at <math>x = c</math> does not affect whether there is a limit.</p> <div style="text-align: center;">  </div>	
One-Sided Limits	Examples
<p><u>One-Sided Limits</u>: [c, L are real numbers] as x approaches c from left OR right, the limit of f(x) equals L</p> <p><u>Left-handed limit</u>: <math>\lim_{x \rightarrow c^-} f(x) = L</math>      <u>Right-handed limit</u>: <math>\lim_{x \rightarrow c^+} f(x) = L</math></p> <hr style="width: 20%; margin-left: 0;"/> <p><math>\lim_{x \rightarrow c} f(x) = L</math> if and only if</p> $\left\{ \begin{array}{l} \lim_{x \rightarrow c^+} f(x) = L \\ \text{AND} \\ \lim_{x \rightarrow c^-} f(x) = L \end{array} \right.$ <p><i>*BOTH right and left-hand limits are equal</i></p>	

Limits at Vertical Asymptotes	Examples
<p><u>Limits at VA:</u> as <math>x</math> approaches <math>c</math> from left OR right, the limit of <math>f(x)</math> equals <math>\infty</math> or <math>-\infty</math></p> <p>Limit from left:</p> $\lim_{x \rightarrow c^-} f(x) = \infty \text{ or } -\infty$ <p>Limit from right:</p> $\lim_{x \rightarrow c^+} f(x) = \infty \text{ or } -\infty$	
Limits at Infinity	Examples
<p><u>Limits at Infinity:</u> as <math>x</math> approaches <math>\infty</math> or <math>-\infty</math>, the limit of <math>f(x)</math> equals <math>L</math></p> $\lim_{x \rightarrow \infty} f(x) = L \text{ OR } \lim_{x \rightarrow -\infty} f(x) = L$ <p>Limits of a function at infinity can approach a number, <math>\infty</math> or <math>-\infty</math></p>	
Limits that fail to exist (DNE)	Examples
<ol style="list-style-type: none"> <li><math>f(x)</math> approaches different limits from left and right</li> <li>function oscillates between 2 numbers an infinite number of times</li> </ol>	
<b>Properties of Limits</b> Given: Limits $L$ and $M$ are real numbers, $c$ and $k$ are real numbers $\lim_{x \rightarrow c} f(x) = L$ and $\lim_{x \rightarrow c} g(x) = M$	
<ol style="list-style-type: none"> <li><u>Sum Rule:</u> <math>\lim_{x \rightarrow c} [f(x) + g(x)] = \lim_{x \rightarrow c} f(x) + \lim_{x \rightarrow c} g(x) = L + M</math></li> <li><u>Difference Rule:</u> <math>\lim_{x \rightarrow c} [f(x) - g(x)] = \lim_{x \rightarrow c} f(x) - \lim_{x \rightarrow c} g(x) = L - M</math></li> <li><u>Product Rule:</u> <math>\lim_{x \rightarrow c} [f(x) \cdot g(x)] = \lim_{x \rightarrow c} f(x) \cdot \lim_{x \rightarrow c} g(x) = L \cdot M</math></li> <li><u>Constant Multiple Rule:</u> <math>\lim_{x \rightarrow c} k \cdot f(x) = k \cdot \lim_{x \rightarrow c} f(x) = k \cdot L</math></li> <li><u>Quotient Rule:</u> <math>\lim_{x \rightarrow c} \frac{f(x)}{g(x)} = \frac{\lim_{x \rightarrow c} f(x)}{\lim_{x \rightarrow c} g(x)} = \frac{L}{M}, M \neq 0</math></li> <li><u>Power Rule:</u> <math>\lim_{x \rightarrow c} [f(x)]^{\frac{r}{s}} = \left[ \lim_{x \rightarrow c} f(x) \right]^{\frac{r}{s}} = L^{\frac{r}{s}}</math>, if <math>\frac{r}{s}</math> is real, <math>r</math> and <math>s</math> are integers, <math>s \neq 0</math></li> </ol>	

Algebraic Method 1: Direct Substitution		Examples
$\lim_{x \rightarrow c} f(x) = f(c)$ <ul style="list-style-type: none"> <li>-polynomial functions (linear, quad, cubic, etc)</li> <li>-easy radical functions</li> <li>-exponential functions</li> <li>-rational functions when denominator <math>\neq 0</math></li> <li>-when <math>c</math> is in the domain</li> </ul>		
Algebraic Method 2: Rational Functions		Examples
<ul style="list-style-type: none"> <li>-Use when you have a rational function</li> <li>-use when you substitute and you get <math>\frac{0}{0}</math></li> <li>-simplify the fraction</li> <li>*dividing out method OR LCD</li> <li>-substitute into simplified fraction</li> </ul>		
Algebraic Method 3: Rationalize the Numerator		Examples
<ul style="list-style-type: none"> <li>-Use when you have a radical function</li> <li>-use when you substitute and denominator = 0</li> <li>-multiply top and bottom by conjugate of top</li> <li>-simplify (original denominator will reduce out)</li> <li>-substitute into simplified fraction</li> </ul>		
Special Methods		
<u>Right and Left- Hand</u> –instead of graphing <ul style="list-style-type: none"> <li>- use for limits as <math>x \rightarrow c</math>, not at infinity</li> <li>-use for point of discontinuity or VA</li> <li>-piecewise function, absolute value in fraction</li> </ul> <ol style="list-style-type: none"> <li>1. Approaching from left and right, substitute numbers closer and closer to <math>c</math></li> <li>2. Limit is <math>\infty</math>, <math>-\infty</math>, or DNE</li> </ol>	<u>End Behavior Model</u> - without graphing <ul style="list-style-type: none"> <li>-use for limits <math>c</math> as <math>x \rightarrow \infty</math> or <math>-\infty</math></li> <li>-use for rational functions form <math>\frac{p(x)}{q(x)}</math></li> <li>-find the horizontal or slant asymptote</li> </ul> <ol style="list-style-type: none"> <li>1. Write function as a single fraction</li> <li>2. Long divide to find asymptote</li> <li>3. The end behavior of the asymptote models the end behavior of the function</li> </ol> <p style="margin-left: 20px;">HA: Limit is a number or 0</p> <p style="margin-left: 20px;">Slant: Limit is <math>\infty</math> or <math>-\infty</math></p>	<u>“Significant Parts”</u> (made up this name) <ul style="list-style-type: none"> <li>-without graphing</li> <li>-use for limits at infinity as <math>x \rightarrow \infty</math> or <math>-\infty</math></li> <li>-use for functions with separate “parts”</li> </ul> <ol style="list-style-type: none"> <li>1. Check each part of the function. Does it increase, decrease, or approach 0 as <math>x</math> approaches <math>\infty</math> or <math>-\infty</math>?</li> <li>2. Which part is significant and affects the limit?</li> </ol>
