

Homework 6.10: Angles and Segments

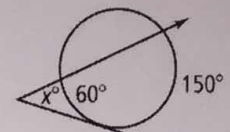

Name: _____

Math 3

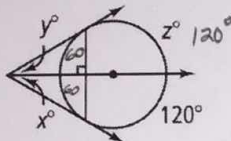

Directions: Solve for x.

1. 
$$x^\circ = \frac{88^\circ + 86^\circ}{2} = 87^\circ$$

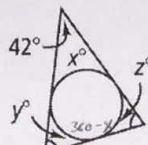

2. 
$$x^\circ = \frac{90^\circ - 20^\circ}{2} = 35^\circ$$

3. 
$$x^\circ = \frac{150^\circ - 60^\circ}{2} = 45^\circ$$

Directions: Solve for each variable listed.

4. 
$$z = 120^\circ$$

$$x^\circ = y^\circ = \frac{120^\circ - 60^\circ}{2} = 30^\circ$$

5. 
$$42^\circ = \frac{(360^\circ - x) - x}{2}$$

$$84^\circ = 360^\circ - 2x$$

$$2x = 276$$

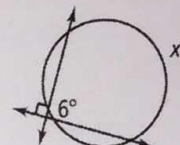

$$x = 138^\circ$$

$$y^\circ = z^\circ$$

$$360^\circ - 138^\circ = 222^\circ$$

$$\frac{222^\circ}{2} = 111^\circ$$

$$z^\circ = 2^\circ = 111^\circ$$

6. 
$$90^\circ = \frac{x^\circ - 6^\circ}{2}$$

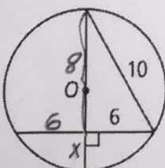

$$x = 186^\circ$$

7. There is a circular cabinet in the dining room. Looking in from another room at point A, you estimate that you can see an arc of the cabinet of about 100° . What is the measure of $\angle A$ formed by the tangents to the cabinet?

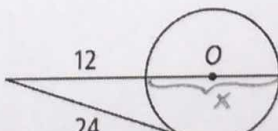

$$m\angle A = \frac{260^\circ - 100^\circ}{2} = 80^\circ$$

Directions: Find the diameter of $\odot O$. A line that appears to be tangent is tangent. If your answer is not a whole number, round to the nearest tenth.

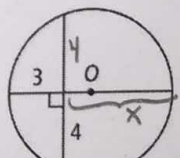

8. 
$$8(x) = 6(6)$$

$$x = \frac{36}{8} = 4.5$$

9. 
$$12(12 + x) = 24(24)$$

$$12 + x = 2(24)$$

$$x = 36$$

10. 
$$4(4) = 3(x)$$

$$x = \frac{16}{3}, \text{ so diam} = 3 + \frac{16}{3}$$

$$= \frac{25}{3} = 8\frac{1}{3}$$

Directions: \overline{CA} and \overline{CB} are tangents to $\odot O$. Write an expression for each arc or angle in terms of the given variable.

11. $m\widehat{AB}$ using x
$$z^\circ$$

$$z^\circ = 360^\circ - x^\circ$$

12. $m\widehat{AB}$ using y
$$z^\circ = \frac{x^\circ - z^\circ}{2}$$

$$y^\circ = \frac{(360^\circ - z^\circ) - z^\circ}{2}$$

$$y^\circ = \frac{360^\circ - 2z^\circ}{2} = 180^\circ - z^\circ$$

$$\text{so } z^\circ = 180^\circ - y^\circ$$

13. $m\angle C$ using x
$$y^\circ = \frac{x^\circ - z^\circ}{2}$$

$$y^\circ = \frac{x^\circ - (360^\circ - x^\circ)}{2} = \frac{360^\circ + 2x^\circ}{2}$$

$$y^\circ = 180^\circ + x^\circ$$
